

Oracle Chooses AnyChart Solution for Latest Release of Oracle® Application Express

SEATTLE, April 18, 2007 – **Sibental Inc.** today announced a licensing agreement with **Oracle** to incorporate Sibental's DBA **AnyChart** technology within **Oracle® Application Express**. As a result, the **AnyChart** Flash Chart Component enables Oracle Application Express Release 3.0 developers to include **Flash®** Charts in their applications. **Sibental** is a member of **Oracle PartnerNetwork**.

Oracle Application Express is a free, Web-based application development tool that enables users to easily build, deploy and manage secure Web applications using only a Web browser. **Oracle Application Express** is integrated with all editions of **Oracle Database 10g** and **Oracle9i Database Release 2**. With the integration of **AnyChart**, Oracle Application Express Release 3.0 now supports **18 types of Flash charts**. There is also a utility that converts existing SVG Charts to Flash Charts.

The use of **AnyChart** allows **Oracle Application Express Release 3.0** developers to offer their customers real-time flash charts without the need to edit Flash source. Core **XML-** based technology allows controlling transparency, color, URL linking, captions, legends, backgrounds, animations, and sound along with the displayed data.

"*AnyChart technology has allowed us to significantly improve Oracle Application Express's charting capabilities,*" said **Michael Hichwa, vice president of software development, Oracle**. Currently, Oracle estimates that approximately **100,000 developers** are using Oracle Application Express.

Oracle Application Express Release 3.0 with Flash Charting is now available for download from <http://apex.oracle.com>.
